

## FCAI ANU Materials – Semi Seniors – PPIS Questions – Dr.Sara

### Question 1

How can you determine the number of items in a `ListBox`?

**Options:**

- A. `ListBox.Count`
- B. `ListBox.ItemCount`
- C. `ListBox.Length`
- D. `ListBox.Size`

**Correct Answer:**

☒ A. `ListBox.Count`

**Explanation:**

`Count` returns the total number of items currently stored in the `ListBox`.  
The other options are not valid properties for a `ListBox` in Windows Forms.

---

### Question 2

What happens if the user enters a non-numeric value in a `TextBox` and the code tries to convert it using `int.Parse(textBox1.Text)`?

**Options:**

- A. It will return 0
- B. It will display an error message automatically
- C. It will throw a `FormatException`
- D. It will ignore the input

**Correct Answer:**

☒ C. It will throw a `FormatException`

**Explanation:**

`int.Parse()` expects a valid numeric string.  
If the input is non-numeric (e.g., "abc"), the program crashes unless the exception is handled.

---

### Question 3

What does the `TryParse()` method return when it fails to convert a string to an integer?

**Options:**

- A. -1
- B. Throws an exception
- C. False
- D. Null

**Correct Answer:**

☒ C. False

**Explanation:**

`TryParse()` never throws an exception.

It safely returns `false` when conversion fails, making it ideal for user input validation.

---

## Question 4

Which property of the Label control is used to set the displayed text?

**Options:**

- A. `TextContent`
- B. `Text`
- C. `LabelText`
- D. `Content`

**Correct Answer:**

☒ B. Text

**Explanation:**

The `Text` property controls what is shown on the Label.

The other options do not exist in Windows Forms.

---

## Question 5

What will happen if you use `File.CreateText()` on a file that already exists?

**Options:**

- A. It will throw an exception
- B. It will append new text
- C. It will overwrite the file's content
- D. It will open the file in read-only mode

**Correct Answer:**

☒ C. It will overwrite the file's content

**Explanation:**

`File.CreateText()` recreates the file if it already exists, deleting its previous content.

---

## Question 6

What is the return value of the `IndexOf` method if the substring is not found?

**Options:**

- A. 0
- B. -1
- C. Null
- D. Throws an exception

**Correct Answer:**

☒ B. -1

**Explanation:**

`IndexOf()` returns -1 to indicate that the search value does not exist in the string.

---

## Question 7

If you want a specific control to be the first one to receive focus when the form loads, what should its `TabIndex` be?

**Options:**

- A. 0
- B. 1
- C. Any positive number

**Correct Answer:**

☒ A. 0

**Explanation:**

Controls are focused in ascending `TabIndex` order.

The control with `TabIndex = 0` receives focus first.

---

## Question 8

What happens if you set a `GroupBox`'s `Text` property to an empty string?

**Options:**

- A. The `GroupBox` shows no title
- B. An exception is thrown
- C. The title becomes "Untitled"
- D. The `GroupBox` is hidden

**Correct Answer:**

☒ A. The `GroupBox` shows no title

**Explanation:**

An empty `Text` simply removes the title.  
The `GroupBox` itself remains visible.

---

## Question 9

What will be the output when the button is clicked twice?

```
private int counter = 0;

private void button1_Click(object sender, EventArgs e)
{
    counter++;
    MessageBox.Show("Button clicked " + counter + " times");
}
```

**Options:**

- A. Shows 1 on first click, 2 on second click
- B. Shows 1 every time
- C. Compile-time error
- D. Nothing happens

**Correct Answer:**

☒ A

**Explanation:**

`counter` is a class-level variable, so its value is preserved between clicks.

---

## Question 10

**What is the default keyboard shortcut to open the Output window in Visual Studio?**

**Options:**

- A. Alt + 0
- B. Alt + N
- C. Ctrl + O
- D. Shift + O

**Correct Answer:**

☒ A. Alt + 0

**Explanation:**

This shortcut opens the Output window where build and debug messages appear.

---

## Question 11

**Which property of a ListBox is used to get the selected item?**

**Options:**

- A. ListBox.Items
- B. ListBox.SelectedItem
- C. ListBox.Text
- D. ListBox.Value

**Correct Answer:**

☒ B. ListBox.SelectedItem

**Explanation:**

`SelectedItem` returns the currently chosen item by the user.

---

## Question 12

**What is the default value of the `AutoSize` property for a Label control?**

**Options:**

- A. True
- B. False
- C. None
- D. 0

**Correct Answer:**

☒ A. True

**Explanation:**

When `AutoSize` is `True`, the `Label` automatically adjusts its size to fit its text.

---

## Question 13

**What will the following code output?**

```
string str = "C# Programming";  
string result = str.Substring(3);  
Console.WriteLine(result);
```

**Options:**

- A. C# P
- B. Programming
- C. Progr
- D. C#

**Correct Answer:**

☒ B. Programming

**Explanation:**

`Substring(3)` starts at index 3 (zero-based), which points to the letter **P**.

---

## Question 14

**Which namespace is required to handle file operations like `File.CreateText`?**

**Options:**

- A. `System.Collections`
- B. `System.IO`
- C. `System.Data`
- D. `System.Text`

**Correct Answer:**

☒ B. `System.IO`

**Explanation:**

All file and directory operations in C# are located in `System.IO`.

---

**Wish you all the best!**  
**Fathy.**
