Example 2

- Create a GUI application that contains a PictureBox control. When the user clicks this control, a message box will appear displaying the string “Hello I’m a cat”.

Example 3

- Create a GUI application that simulates a card being flipped over. When the application runs, the form will initially display the back of a poker card, as shown on the left Figure. When the user clicks the "Show the Card Face" button, the card will be flipped over to show its face, as shown on the right.
